SUMMARY

I am a Software Developer who enjoys exploring and solving complex problems. I like participating in hackathons and love to challenge myself by learning something new.

EMPLOYMENT

March 2022 – July 2023

Web Developer, 8BY8 ([Github repository](#) - [Company Site](#) - [Application](#))

- Worked on a large team to create a visually appealing and user-friendly website for a social media challenge used by hundreds of people.
- Created multiple features for multiple user stories from initial design through completion, optimizing all cross-browser and multi-platform compatibility.
- Technologies used : React, Jest, Firebase

May 2018 – September 2019

Front-End Web Developer, Kentro

- Successfully and accurately translated design specifications from Figma into working code.
- Worked on a quick, easy, and secure authentication for users to login and sign-up.
- Created a simple user-friendly, responsive frontend for a messenger application so teachers and hundreds of students could communicate with each other using Material-UI and SASS.
- Technologies used : React, Redux, Jira, Postman, Jest

SOFTWARE PROJECTS

Spotify Playlist Manager Application ([Github repository](#) - [Application](#))

- Created a full stack project using MongoDB, Express, React, and Node and using Spotify's API and with a CI/CD pipeline using CircleCI and AWS Elastic Beanstalk.
